

# Rania Wachene

Computer Engineer | Cloud & DevSecOps

📞 +216 22 600 311 | ✉ raniawachen21@gmail.com | 🔗 LinkedIn | 🐙 GitHub | 🌐 Portfolio | 📍 Tunis, Tunisia

## Summary

---

Cloud & DevOps Engineer with hands-on experience building and securing CI/CD pipelines, automating cloud infrastructure, and delivering production-grade systems. Passionate about scalable architecture, DevSecOps practices, and SRE principles — with a proven track record in IaC, monitoring, and reducing deployment friction. Comfortable working in fast-paced, Agile teams; fluent in English and French and open to relocation.

## Education

---

**The Private Higher School of Engineering and Technologies (ESPRIT)** **2022 – 2025**  
*Engineering Degree in Computer Science, Cloud Engineering Specialty* *Tunis, Tunisia*

**Faculty of Legal, Economic and Management Sciences (FSJEGJ)** **2019 – 2022**  
*Bachelor's Degree in Business Intelligence — Top of Class* *Jendouba, Tunisia*

## Experience

---

**Kromberg & Schubert** **January 2025 – August 2025**  
*DevSecOps Engineer Intern* *Beja, Tunisia*

- Architected and delivered a full-stack HR digitalization platform for **8,000+ employees**, automating document workflows and eliminating manual paper-based processes across 5 departments.
- Built a secure Azure DevSecOps CI/CD pipeline integrating SAST, secret scanning, and container scanning, improving security by ~80%.
- Provisioned and managed cloud infrastructure using Terraform and Ansible, achieving **99.9% service availability** through automated rollback and 24/7 Prometheus/Grafana monitoring.

**DataDoIt** **July 2024 – September 2024**  
*DevOps Intern* *Ariana, Tunisia*

- Maintained and enhanced CI/CD pipelines for a carbon footprint tracking platform, reducing average deployment time by ~30%.
- Set up centralized monitoring with Prometheus and Grafana, enabling proactive alerting that reduced mean time to detection (MTTD) for incidents from hours to under 15 minutes.
- Diagnosed and resolved recurring build failures, improving pipeline success rate to **95%+** over the internship period.

**DataDoIt** **July 2023 – September 2023**  
*Software Engineering Intern* *Ariana, Tunisia*

- Developed a Business Intelligence platform for retail analytics using Spring Boot and Power BI, enabling stakeholders to track KPIs in real-time and reducing manual reporting effort by ~50%.
- Introduced CI/CD pipelines, automating build, test, and deployment and reducing release cycle time from days to hours.
- Collaborated with engineering team to stabilize deployments across dev, staging, and production environments, cutting environment-related bugs by ~35%.

## Projects

---

**SnowMountain** | *Ski Resort Management Platform* **Sep 2024 – Nov 2024**

- Designed an end-to-end DevSecOps pipeline using Jenkins, Docker, SonarQube, and Nexus, reducing time-to-deploy by ~60% compared to manual processes.
- Integrated Prometheus + Grafana dashboards providing real-time visibility into system health, with automated alerting on 8 key performance metrics.
- **Stack:** Spring Boot, Angular, MySQL, Jenkins, Docker, SonarQube, Nexus, Prometheus, Grafana

## MicroCommerce | *Microservices E-Commerce Platform*

Sep 2024

- Designed a 5-service microservices architecture deployed on Kubernetes with automated rolling updates, zero-downtime deployments, and horizontal pod autoscaling.
- Enforced supply-chain security with Trivy image scanning and SonarQube SAST gates, blocking deployments on **Critical/High vulnerabilities**.
- **Stack:** Jenkins, Docker, Kubernetes, Trivy, SonarQube, Prometheus, Grafana

## EspritCollab | *Cloud Collaboration Platform*

Oct 2023 – May 2024

- Deployed a multi-tenant collaboration platform on OpenStack with containerized microservices, supporting **500+ concurrent student users** with auto-scaled Kubernetes workloads.
- Implemented full observability stack tracking uptime, latency, and resource utilization across all services.
- **Stack:** Spring Boot, Angular, OpenStack, Docker, Kubernetes, Prometheus, Grafana
